PROJECT

TITLE: POWER SAVING MANAGEMENT

The system is capable of detecting the presence or absence of a person in a room and can automatically turn off the light and fan or any other electrical appliance when not in use.

TITLE: RASA CHAT BOT

Rasa is an open-source framework for building AI-powered chatbots and virtual assistants using natural language processing (NLP). It allows developers to create conversational agents that understand user inputs, manage dialogues, and integrate with various platforms.

TITLE: Flight Delay Prediction using Flask and Machine Learning

This project builds a web application using Flask to predict flight delays based on historical flight data stored in a CSV file. The machine learning model is trained using Python libraries like pandas, scikit-learn, and TensorFlow to analyze factors such as departure time, weather conditions, and airline performance.
